

# ARTIFICIAL INTELLIGENCE *at the* FRONT DOOR OF POLICING

HOW AI IS SHAPING DETECTION, INVESTIGATION,  
AND OFFICER DECISION-MAKING

## PROGRAM OVERVIEW

Artificial intelligence is now embedded in daily law enforcement operations, shaping how officers detect activity, prioritize information, and initiate action. From license plate readers to predictive analytics, these tools influence decisions at the earliest stages of policing, often before formal reporting or supervisory review occurs.

This program examines how AI is changing policing in practice, including the growing reliance on system-generated leads and the risks that come with it.

Participants will explore key challenges such as bias, transparency, and training gaps, and will learn practical guardrails to ensure AI supports, rather than replaces, professional judgment.

## LEARNING OBJECTIVES

- Understand how AI is used in law enforcement and how it shapes frontline decision-making
- Identify key risks, including bias, false positives, and overreliance on system outputs
- Recognize transparency, training, and policy gaps in AI deployments
- Apply practical guardrails to ensure AI supports professional judgment and accountability

## PROGRAM FORMATS

- 60-Minute Session — Focused overview
- 90-Minute Session — Expanded discussion
- Half-Day Training — In-depth application
- Keynote Presentation — Conference format

*Available for in-person and virtual delivery*

## ABOUT THE JUSTICE SPEAKERS INSTITUTE

The Justice Speakers Institute provides training and consulting on emerging issues in the justice system, including artificial intelligence and procedural fairness. Its work includes national and international publications, judicial training, and practical guidance for courts and legal professionals.
